Regards,

Januar, 2023

At the very beginning I would like to mention that I have around 6 months of experience at working as a front-end developer. I've worked on react and react native projects.

In 6 months, I've worked on 3 different projects that were built around the same product. The American company that was outsourcing us were taking care of passengers that needed a ride from their home to the airport and vice versa. They had an app where customers could purchase a ticket with desired locations and transportation types (bus, car etc) as well as many other options regarding the trip. They had a web app that was made in react, a mobile app that was made in react native and a backoffice where their agents could assign drivers to rides, preview various statistics and it had many other features as well, it was made in react too. As the American company was eventually taken over by a bigger organisation, the team they outsourced was laid off (including me).

That is the reason I'm currently looking for a new job. Your company looks interesting to me and it seems like a place where I could thrive. Hence, I'm sending you my resume along with my portfolio. I hope that you are going to like it and that we will have an opportunity to have a conversation and discuss everything further than this.

I am looking forward to hearing from you.

Kind regards,

Tatjana Devrnja
